

Marek Sinagl

Product Engineer

Iowa City, IA (open to remote)
(319) 259 2535 | marek.sinagl@gmail.com
github.com/marekmez | [LinkedIn](#) | [Portfolio](#)

Full-stack product engineer who builds and operates software end to end. Created Archa, a non-profit student knowledge-sharing platform, at university in 2007 and continue to maintain it as sole developer: ~20k registered users, ~6k logged-in users last semester, and ~3.8M page views. One of two primary developers co-leading Mingly, an early-stage spatial video-collaboration startup beginning a fall 2026 pilot at BI Norwegian Business School. Also a registered architect, with more than ten years of practice turning ambiguous client needs into buildable solutions through design, computational workflows, and multidisciplinary coordination.

Two tracks in parallel: shipping software since 2007, practicing architecture since 2011.

Product and software engineering

2023 – present

Co-Lead Software Engineer, Mingly

mingly.world

Early-stage spatial video collaboration startup: WebRTC conferencing on an interactive shared canvas.

- One of two primary developers co-leading engineering from early development through alpha and into a fall 2026 pilot at BI Norwegian Business School.
- Architected a distributed system with a Go backend, Node.js media and Socket.IO services, and a Nuxt/Vue frontend.
- Built the real-time layer and collaboration tools: participant presence, spatial audio and video, document sharing, presentations, and markup.

2007 – present

Creator & Sole Software Engineer, Archa

archacvut.cz

Non-profit study-materials and knowledge-sharing platform for university students.

- Founded Archa at university in 2007 and grew it into a production platform with ~20k registered users; ~6k logged-in users in the most recent semester and ~3.8M page views.
- Currently maintain the platform as sole developer, owning architecture, security, database, deployment, CI/CD, features, and long-term operations.
- Shipped LLM-based document classification and summarization into the production pipeline.
- Designed a separate Python/FastAPI service with background workers for document extraction, previews, file processing, and asynchronous workflows.
- Evolved the platform from an early PHP application to Laravel (PHP 8.5) and Vue while maintaining continuous production service and preserving years of accumulated data.

2020 – 2022

Newburyport, MA

Software Engineer, Elyxor Inc.

elyxor.com

- **Packing Slips:** Sole full-stack developer of a warehouse logistics application, designing and implementing the Python/Flask backend and React frontend while collaborating with QA and a partner on product requirements and design.
- **Controller:** Contributed within a larger team to a cloud-management dashboard for starting and stopping virtual machines across providers including AWS and Azure, monitoring spend, and recommending machines to shut down to reduce operating costs. Built features with Java/Spring Boot and Vue.
- Used Jira and Bitbucket for ticket-based planning, pull requests, and code review while delivering client-facing production software.

Technical skills

Languages	PHP, Go, Python, JavaScript/TypeScript, Java
Frameworks	Laravel, FastAPI, Vue.js, Nuxt, Node.js, React, Flask, Spring Boot
Data and real-time	MySQL, REST APIs, WebRTC, Socket.IO, background workers, webhooks, file-processing pipelines
Operations	Git, GitHub, CI/CD, Docker, Linux, AWS EC2
AI and automation	LLM APIs, document extraction, classification, summarization
Computational design	Grasshopper, Rhino 3D, Python scripting, Dynamo, Revit

Architecture and design

More than a decade of architectural practice in three countries: understanding what clients need, resolving ambiguous briefs into buildable detail, and coordinating multidisciplinary teams to deliver it.

2022 – present Iowa City, IA	Architectural Designer , Neumann Monson Architects neumannmonson.com • Design and coordinate complex commercial and multifamily projects across multidisciplinary consultant teams and client stakeholders. • Develop computational design and BIM workflows using Grasshopper, Python scripting in Rhino 3D, and Dynamo for Revit, alongside building-code analysis and construction documentation.
2015 – 2019 Sydney, Australia	Associate Architect , Silvester Fuller • Project architect, designer, and BIM coordinator on complex residential, mixed-use, and commercial projects.
2011 – 2014 Prague, Czech Republic	Director & Founding Partner , Mio architects • Led architectural projects from concept through construction while managing design, client coordination, and studio operations.

Education and registration

2015	Registered Architect , Czech Chamber of Architects
2011	Master of Architecture & Building Engineering , Czech Technical University in Prague
2009	Bachelor of Architecture & Building Engineering , Czech Technical University in Prague
